

## Listing of Claims:

1. (Currently Amended) A canopy for a stationary covering device, comprising:  
a cover having an asymmetrically positioned vertex point from which the cover projects with unequal extensions, the cover having a ~~convex~~ leading edge,

wherein at the asymmetrically positioned vertex point, the canopy is rotatable around a fixed longitudinal axis relative to the ground to provide an adjustable coverage zone within a desired stationary area when rotated from a first canopy position to a second canopy position at an elevational level relative to the ground;

wherein at least one of the unequal extensions comprises a visor extension that is supported by a main support member and a plurality of adjacent support members, the plurality of adjacent support member having a length less than a length of the main support member[[s]]; ~~and~~

wherein the main support member creates an apex for the ~~convex~~ leading edge, wherein the apex is configured to allow the cover to be aligned with respect to the sun to provide the adjustable coverage zone; and

wherein the unequal extensions define a ratio of asymmetry between the length of the visor extension with respect to the length of adjacent support members, as measured from the vertex point in a range between 1.5:1 and 2.3:1.

2. (Canceled)

3. (Previously Presented) The canopy of claim 1 further comprising one or more traversal support members that support the unequal extensions from the vertex point.
4. (Previously Presented) The canopy of claim 3, wherein the one or more traversal support members comprise one or more support ribs that traverse the cover.
5. (Canceled)
6. (Currently Amended) The canopy of claim 4 ~~5~~, wherein at least ~~lease~~ one of the one or more support ribs has a variable length.
7. (Currently Amended) The canopy of claim 3 ~~6~~, wherein the one or more traversal support members comprise at least one of a collapsible member, a retractable member and an extendible member.
8. (Canceled)
9. (Previously Presented) The canopy of claim 1, wherein the cover comprises a pliable material, and wherein the pliable material comprises at least one of a lightweight ultraviolet resistant material, a cloth material, a nylon material, or an acrylic material.
10. (Previously Presented) The canopy of claim 9, wherein the cover is fabricated as at least one of a single integrated unit and a number of pieced together sub-units.
11. (Canceled)
12. (Previously Presented) The canopy of claim 1, wherein the longitudinal axis is a tilted longitudinal axis.

13. (Currently Amended) A covering device, comprising:

a canopy, comprising

a cover having an asymmetrically positioned vertex point from which ~~the cover extends an~~ unequal extensions extend, wherein at the asymmetrically positioned vertex point, the canopy is rotatable around a fixed longitudinal axis relative to the ground to provide an adjustable coverage zone within a desired stationary area when rotated from a first canopy position to a second canopy position at an elevational level relative to the ground; and

a fixed support mechanism for positioning the canopy relative to the elevated

level; and

wherein the unequal extensions define a ratio of asymmetry between a length of a visor extension with respect to a length of adjacent support members, as measured from the vertex point in a range between 1.5:1 and 2.3:1 ~~an alignment gauge comprising a light transmitting material extending through the cover.~~

14. (Previously Presented) The canopy of claim 12, wherein a fixed support mechanism comprises a vertical support at the asymmetrically positioned vertex point from beneath the canopy.

15. (Previously Presented) The canopy of claim 12, wherein a fixed support mechanism comprises a cantilevered support at the asymmetrically positioned vertex point by a projection from above the canopy.

16. (Previously Presented) The canopy of claim 12, wherein said coverage zone comprises a shading zone for providing shade during daylight hours.
17. (Previously Presented) The canopy of claim 12 further comprising one or more traversal support members that support the unequal extensions from the vertex point.
18. (Currently Amended) The canopy of claim 17 ~~42~~, wherein the one or more traversal support members comprise one or more support ribs that traverse the cover.
19. (Currently Amended) The canopy of claim 17 ~~42~~, wherein at least one of the one or more traversal support members has a fixed length.
20. (Currently Amended) The canopy of claim 17 ~~42~~, wherein at least one of the one or more traversal support members has a variable length.
21. (Currently Amended) The canopy of claim 17 ~~42~~, wherein the one or more traversal support members comprise at least one of a collapsible member, a retractable member and an extendible member.
22. (Canceled)
23. (Previously Presented) The canopy of claim 12, wherein the cover comprises a pliable material and wherein the pliable material comprises at least one of a lightweight ultraviolet resistant material, a cloth material, a nylon material, or an acrylic material.
24. (Previously Presented) The canopy of claim 12, wherein the cover is fabricated as at least one of a single integrated unit and a number of pieced together sub-units.
25. (Canceled)

26. (Previously Presented) The canopy of claim 1, wherein the fixed longitudinal axis is at least one of a longitudinal axis or a tilted longitudinal axis.
27. (Canceled)
28. (Previously Presented) The canopy of claim 1, wherein the main support member and adjacent support members are extendable and wherein the visor extension is extendable and retractable.
29. (Canceled)
